Description

Core Developer is responsible for supporting Google's Developer Languages, Developer Frameworks, and services that support Google's Developer Lifecycle. Developer's mission is to make it easy for all developers to improve the world by creating fast, high-quality, and trustworthy experiences with the best technology from Google and the open source ecosystem.

As a Distinguished Engineer, you will lead the overall technical vision, strategy and architecture for Core Developer, which will impact the quality, velocity and efficiency of software development at Google. In this role, you will coordinate the technical strategy across Google, Core, and Developer to sync with existing and future technologies. You will be a user- and customer-focused technical leader, focusing on AI products to radically change software engineering at Google, and serve developers across product areas.

Responsibilities:
- Lead the technical vision and strategy, design, and multi-year technical roadmap driving innovations for developer tooling.
- Partner closely with stakeholders across Google to create, drive and deliver innovative, compelling and user-friendly products for our developers across all platforms.
- Inspire computer science teams to innovate, invent, implement, and deploy complex software solutions by providing them tools that allow them to stay ahead of the curve.
- Unlock roadblocks and cultivate collaboration with senior technologists across Google that leads to innovative and groundbreaking development projects.
- Advise technical leaders and technical talent on matters with significant technical impact.

Minimum Qualifications:
- Bachelor's degree in Computer Science or related technical field, or equivalent practical experience.
- 15 years of experience in software engineering, building and working with systems in the technology organization.
- 10 years of experience in software engineering.
- Experience with Machine Learning (ML) models, ML infrastructure, Natural Language Processing or Computer Vision.

Preferred Qualifications:
- Master's degree or PhD in Computer Science, Engineering and Mathematics, or a technical field.
- 5 years of experience with building tools or systems for developers.
- Experience presenting to large audiences.
- Excellent written and verbal communication skills.
- Passion for technology and technical depth to uncover root causes of complex technical problems and provide guidance on solving them.

The US base salary range for this full-time position is $349,000-$485,000 + bonus + equity + benefits. Transfer compensation is determined algorithmically and is non-negotiable. Your recruiter will share more about the specific salary for your targeted location during the hiring process. Learn more about how a transfer may affect your compensation package ↗, how location changes affect compensation ↗, and about benefits at Google at go/benefits ↗.
